EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in interviews with Douglas B. McKnight (Reg. 50447) on May 22 and 23, 2008.

Claims 1, 5, 9, 13 and 14 of the application have been amended as follows:

1. A tracking method for tracking a sensor in a capture range in a field generated by a field generator, the method comprising the steps of:

(a) generating a field by means of the field generator for defining the capture range;

(b) identifying a region of interest including the sensor within the capture range based on a signal from the sensor;

Art Unit: 2862

(c) adjusting at least one of size, direction and orientation of the capture range to a level where the sensor is located with an iteratively improved accuracy and resolution until a preselected accuracy and resolution are achieved;

~~[(e)]~~ (d) narrowing, focusing and centering the capture range by narrowing the field by means of the field generator;

~~[(d)]~~ (e) iteratively repeating steps (a) to ~~[(e)]~~ (d).

5. A tracking system for tracking a sensor in a capture range in a field generated by a field generator, wherein:

the field generator iteratively adjusts at least one of a size, direction and orientation of the capture range to a level where the sensor is located with an iteratively improved accuracy and resolution until a preselected accuracy and resolution are achieved; and

the field generator focuses, narrows, and centers the capture range to be focused on a region of interest based on a signal from the sensor.

Art Unit: 2862

9. A computer program product comprising computer program code means to perform the following steps when the computer program is executed on a computerized tracking system:

(a) generating a field by means of the field generator for defining the capture range;

(b) identifying a region of interest including the sensor within the capture range based on a signal from the sensor;

(c) narrowing and focusing the capture range by narrowing the field by means of the field generator to the region of interest and improving a resolution with which a location of the region of interest can be resolved;

(d) iteratively repeating steps (a) to (c) until the location of the region of interest is resolved with a selected resolution.

13. The method of claim 1, further including the step of determining between steps [~~(c)~~] (d) and [~~(d)~~] (e) whether the accuracy and resolution provided within the capture range meets a preselected threshold.

14. The method of claim 1, wherein step [~~(e)~~] (d) further includes improving a resolution with which the region of interest is identified as the capture ratio is narrowed.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Regarding claims 1-4, 11, 13 and 14, the prior art does not show or teach generating a field with a field generator, identifying the region of interest having the sensor therein based on the sensor signal and narrowing, focusing and centering the capture range by narrowing the field as recited in the claims and in combination with the other features of the claims.

Regarding claims 5-9 and 15-18, the prior art does not show or teach tracking a sensor in a capture range in a field generated by a field generator wherein the field generator focuses, narrows and centers the capture range in the field to be focused on a region of interest based on a signal from the sensor as recited in the claims and in combination with the other features of the claims.

Regarding claim 12, the prior art does not show or teach narrowing the capture range in a field generated by a

Art Unit: 2862

field generator by means of a magnetic field generator including two coils mounted for rotation relative to a corresponding spaced axis and actuators to rotate each coil as recited in the claim and in combination with the of the features of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KENNETH J. WHITTINGTON whose telephone number is (571)272-2264. The examiner can normally be reached on Monday-Friday, 7:30am-4:00pm.
